Room 514 (IT Pro, Level 200)

Users in the Cloud

Michael Doyle, Propoint Technology

Managing users in the cloud is more difficult than ever. Our user data is one place and Office 365 users are in another. How do you keep everything in synch? This session covers the ins and outs of users in the new cloud space as well as keeping things in synch on-premises. There is some code in this session but don't be scared off by it! We will cover a host of other business topics since the user and the business are not separate. The users *are* the business.

Powering Up SharePoint and Office 365 to Solve Real Business Problems

Scott Restivo, Crow Canyon

Can SharePoint or Office 365 be used for a Help Desk? An Asset Management system? Onboarding? How about for Request Tracking? Businesses are looking to SharePoint and Office 365 to provide workflow and business process solutions. Crow Canyon's NITRO platform gives SharePoint and Office 365 the power they need to deliver robust applications for mission-critical purposes. See how Crow Canyon uses its NITRO platform to build applications and custom solutions that streamline organizations worldwide.

The Great SharePoint Adventure 2016

Wen He, eWorld

Aloha and welcome to the Great SharePoint Adventure 2016! This year marks the 10th anniversary of our SharePoint User Group and the 5th anniversary of our SharePoint Saturday Honolulu. As we look back and celebrate our local community we have built and the business successes we have helped, we look forward to the new SharePoint that is more powerful and mobile. We will be unveiling the down level details around the major features such as MinRole, Fast Site Creation, the increased file upload sizes & durable links in SharePoint 2016, and also demoing the power of PowerBI and PowerApps in SharePoint Online. SharePoint 2016 is the foundation for the future and our adventure starts now!

BREAKOUT 1
10:15—11:15

Room 216 (Business, Level 100)

Drive on the FastTrack to SharePoint End User Adoption for O365 & SharePoint 2016

Heather Newman, Content Panda

With the introduction of new technologies or the migration from old to newer versions, one of the largest hurdles for businesses is end user adoption, especially in the Enterprise Collaboration software space. This session showcases a tried and true end user adoption checklist and a detailed introduction to the Microsoft Fast Track for Office 365 and SharePoint campaign with proven best practices and strategies for success. Heather will share stories, examples and best practices so you race across the finish line to adoption victory.

Room 514 (IT Pro, Level 100)

Navigation: A Step Towards Success

Stacy Deere-Strole, Focal Point Solutions, LLC

Navigation can single-handedly destroy any SharePoint implementation. If your users cannot find what they are looking for in 3 clicks or less they lose focus and often the drive to reuse the site. A bookmark may appear to be a solution, but results in users missing all the information the company is trying to share.

This session explores navigation best practices for how to clean up existing navigation to make it relevant, easy to use and turn it into the wow factor of your site.

The Great SharePoint Adventure 2016 for Developers
Wen He, eWorld

SharePoint 2016 is hot off the presses just in time for this conference, and offers many development opportunities. In this demo-filled session, you will learn how to set up a complete development environment, best practices for developing client and server side solutions, and the tradeoffs of developing SharePoint full trust solutions versus SharePoint add-ins (SharePoint apps). You will also learn how to build a BI dashboard using PowerBI and a mobile app for SharePoint using PowerApps. Lastly, we will preview the brand new SharePoint Framework, a page and part model that enables fully supported client-side development, easy integration with the Microsoft Graph and support for open source tooling.

A More Productive Mobile Workforce
Sean Fiene, Nintex

Mobile accessibility is no longer a convenience, but a necessity in todays workplace. Sean Fiene, Technical Evangelist for Nintex, will show you how to easily build, deploy and manage mobile applications through the use of Nintex Forms, Nintex Workflow and Nintex Mobile.

BREAKOUT 2
11:30—12:30

What do YOU get from SharePoint Hybrid?
Vlad Catrinescu, vNext Solutions

Every time you see a blog post about SharePoint 2016, you see the word hybrid. But what exactly is a hybrid infrastructure and what features does the business user get? In this session we will look at Share-Point Hybrid from a business user point of view to understand what features we get out of it. We will look at Hybrid Team Sites, Hybrid Search, Hybrid Extranet sites and more!

Go with the MicrosoftFlow
Jennifer Pearcey, eWorld

Flow is in beta as a new offering that will allow users to automate workflows that integrate into the SaaS's and business apps that users are relying on to support or run their operations today. Flow provides connection points to these system and can perform automated actions based on events that occur within the external systems, not just within SharePoint as traditional OOB workflows offered. To date SharePoint workflows have been targeted to the organization while Flow, based on the templates offered today, are targeted to and run as the individual end user. This session will break down Flow services as well as demonstrate a live Twitter Cloud to illustrate setting up a Twitter Flow and using PowerBI to surface a Word Cloud of live tweets.

Building Workflows with SharePoint Designer 2013 - The Good, the Bad and the Ugly
Lenn Higa, Synergy

This session will provide an introduction into Share-Point Designer 2013 workflows for Office 365, build various types of workflows and identify some of the new features of SharePoint Designer 2013 relating to workflow development. We'll take a look at what works well, some valuable workarounds and what to stay away from.

Accelerate SharePoint Success: How to Best Plan, Manage and Control Migration Projects
Randy Williams, AvePoint

Lack of planning is a key contributor to SharePoint deployment failure. To deliver successful SharePoint migration projects, having an effective project management strategy and technical approach is paramount. Executive support, planning, and realistic expectations are crucial to ensure SharePoint migration success.

Join in this interactive workshop to gain practical guidance on how to plan, manage and control SharePoint migration projects. In this session, you will learn how to:

• Develop a project management process for your SharePoint upgrade and migration project
• Apply relevant strategies in mapping business needs to

identify SharePoint features and capabilities
• Ensure your information architecture, infrastructure design and data governance strategy meet business needs
• Employ a 5 step technical approach to your migration

BREAKOUT 3
1:30—2:30

Governance is not an Option
Stacy Deere-Strole, Focal Point Solutions, LLC

It's hard to find a valid reason as to why Governance should not be completed, maintained, or approved in budgets. Governance is not optional in any organization if processes and procedures are to be followed. When governance is put on the back burner, there are issues with poor communication, poor outcomes, not meeting service level agreements, and on and on. If there is no single source of truth in how all the functions of the business run, it's next to impossible to build a solid foundation and keep it running optimally so that your organization can be successful. In this session we will review what governance is, how it can be useful, how you can get started, maintain it, and most importantly how to get it approved!

PowerShell for Office 365
Vlad Catrinescu, vNext Solutions

Take your Office 365 Administrator skills further by learning to automate repetitive tasks using the magic of PowerShell. In this session you will learn how to use PowerShell for Office 365, keeping the focus on Share-Point online. A basic understanding of PowerShell is recommended to get the most out of this session!

Architecting Solutions and Systems – Randy's Secrets to Success
Randy Williams, AvePoint

This session will provide background and guidance on how Randy has architected software solutions for the past 20+ years. This will cover a range of mostly tech-

nical topics, including infrastructure planning, trade-off considerations, performance and scalability, and separation of tiers. Expect to hear plenty of stories from real projects over his career, along with numerous tips on his secrets to success.

The Future of In-Context Help and Training – What's New with Content Panda
Heather Newman, Content Panda

End user adoption is a key component to maximizing investments made in training, governance policies and best practices. Finding the information "in-context" is paramount to superior productivity and return on your overall SharePoint investment.

Content Panda lights-up SharePoint with the best and most relevant content where and when users need it most - inside the SharePoint interface. In this session you will learn how Content Panda accelerates user adoption, simplifies training and support, and promotes governance and compliance policies.

BREAKOUT 4
2:45—3:45

Demystifying OneDrive for Business: Why It's Important to Your Users, Your IT and Your Business
Jeff Mack & Lou Mickley, Dell

This session will help you understand different facets for properly planning and implementing OneDrive for Business and discuss real world examples and share lessons learned. Topics will include on-premises vs. the cloud, syncing, sharing, migration, common pitfalls, and driving cultural change in your organization. This session will be fast paced so hold on to your seat.

A special thank you to our hosts at PCATT!
